

Verification Log

Project: NovaTech Revenue Intelligence Dashboard

Date: September 11, 2026

Analyst: Ayomide Ayodele

Knowledge Base 1: CRM Deals (novatech_crm_deals.csv)

Entry 1

Question Asked: "How many unique opportunities exist in the CRM deals dataset?"

Q's Response: 63,420 unique opportunity records were identified in the dataset.

Expected Answer (from Data Dictionary): The CRM deals file contains sales opportunity records with fields including opportunity_id, deal_value, sales_rep, sales_region, product_name, product_category, and deal_stage. The opportunity_id field serves as the unique identifier for each deal record.

Assessment: PASS

Cross-Check: Opened the Sales Pipeline and Deals sheet on the published dashboard. The KPI card displays an opportunity_id count of 63,420. This matches Q's response exactly. Additionally, opened the CRM deals dataset in QuickSight and confirmed the row count aligns with this figure.

Entry 2

Question Asked: "What are the distinct sales regions in the CRM data?"

Q's Response: Three distinct sales regions were returned: West, Central, and East.

Expected Answer (from Data Dictionary): The sales_region field contains geographic territory assignments for each deal. Expected values include West, Central, and East.

Assessment: PASS

Cross-Check: Opened the Sales Pipeline and Deals sheet and reviewed the horizontal bar chart titled "Deal Value by Sales Region." The chart displays exactly three regions: West, Central, and East. No unexpected or null region values appear in the visualization. The dashboard confirms Q's response is complete and accurate.

Knowledge Base 2: Marketing Campaigns (novatech_marketing_campaigns.csv)

Entry 3

Question Asked: "What is the total campaign spend across all marketing campaigns?"

Q's Response: Total campaign spend is \$364,890,648.

Expected Answer (from Data Dictionary): The campaign_spend field captures the dollar amount allocated to each campaign record. Summing across all records should reflect total marketing investment.

Assessment: PASS

Cross-Check: Opened the Marketing Campaign Performance sheet. The KPI card at the top of the sheet displays total campaign spend of \$364.9M. This matches Q's response when rounded. Also verified by checking the revenue attributed figure of \$26.1M on the same KPI card, confirming the spend-to-revenue relationship is consistent with the negative 92.9% overall ROI calculated in the analysis.

Entry 4

Question Asked: "How many distinct campaign names exist in the marketing data?"

Q's Response: Six distinct campaign names were returned: Q3 Growth Sprint, NovaPulse Launch, NovaEdge Awareness, Year-End Accelerator, Digital Retarget, and Enterprise Expansion.

Expected Answer (from Data Dictionary): The campaign_name field identifies each marketing initiative. Six campaigns were expected based on the source data.

Assessment: PASS

Cross-Check: Opened the Marketing Campaign Performance sheet and reviewed the donut chart titled "Count of Lead_id by Campaign_name." The chart displays exactly six segments, one for each campaign name. All six names match what Q returned. The total lead count shown in the center of the donut chart is 65,448, which is consistent with the sum of leads across all six campaigns.

Knowledge Base 3: Support Tickets (novatech_support_tickets.csv)

Entry 5

Question Asked: "How many total support tickets exist in the dataset?"

Q's Response: 2,792 support tickets were identified.

Expected Answer (from Data Dictionary): The ticket_id field uniquely identifies each support interaction. The total count should reflect all logged customer support events.

Assessment: PASS

Cross-Check: Opened the Customer Support and Health sheet. The KPI card displays a ticket count of 2,792, which matches Q's response exactly. Further verified by reviewing the donut chart for customer sentiment, where the three sentiment categories (Neutral at 1,821, Negative at 630, and Positive at 341) sum to 2,792, confirming internal consistency across visuals.

Entry 6

Question Asked: "What are the distinct customer sentiment values in the support data?"

Q's Response: Three sentiment categories were returned: Neutral (1,821 tickets), Negative (630 tickets), and Positive (341 tickets).

Expected Answer (from Data Dictionary): The customer_sentiment field categorizes each ticket by the tone of the customer interaction. Expected values are Positive, Neutral, and Negative.

Assessment: PASS

Cross-Check: Opened the Customer Support and Health sheet and reviewed the donut chart titled "Tickets by Customer Sentiment." The chart shows three segments matching Q's response: Neutral at 65.2%, Negative at 22.6%, and Positive at 12.2%. Multiplying these percentages by the total ticket count of 2,792 produces 1,821, 630, and 341 respectively, which confirms Q's absolute numbers are accurate.

Entry 7

Question Asked: "Which product areas generate the most support tickets?"

Q's Response: Notifications leads with 567 tickets, followed by Analytics Dashboard with 561 tickets. Together they account for 1,128 tickets.

Expected Answer (from Data Dictionary): The product_area field identifies which product module the ticket relates to. The horizontal bar chart on the support sheet should reflect the distribution.

Assessment: PASS

Cross-Check: Opened the Customer Support and Health sheet and reviewed the horizontal bar chart titled "Tickets by Product Area." Notifications and Analytics Dashboard are clearly the two tallest bars, sitting well above all other product areas. The combined count of 1,128 represents 40.4% of the 2,792 total, which matches the annotation text on the dashboard that states these two modules generate over 40% of all tickets.
